ACKNOWLEDGEMENT

I would like to express my sincere gratitude to everyone who supported me in completing my Python project, **"Ultimate Quiz Arena."**

I am thankful to my faculty members for providing me with the opportunity to work on this project and for guiding me throughout its development. Their suggestions helped me understand how Python programming concepts can be combined to create an interactive and useful application.

I would also like to thank my classmates and friends who helped me test different parts of the program and provided useful suggestions regarding the questions, menu structure and overall user experience.

This project helped me improve my understanding of important Python concepts such as variables, lists, dictionaries, conditional statements, loops, functions, user input and the random module.

Finally, I am grateful to my institution for providing me with the learning environment and resources required to complete this project successfully.

FALAK MINOCHA

INTRODUCTION

3.1 Project Overview

Ultimate Quiz Arena is an interactive, console-based quiz and mini-game application developed using Python.

The main purpose of the project is to make quiz-based learning more interesting by combining normal question answering with game-like features. Instead of providing only a simple question-and-answer system, the project includes different quiz modes, difficulty levels, power-ups, experience points, coins, achievements, statistics and mini-games.

The project is designed using beginner-level Python concepts so that its working can be easily understood and explained.

The program uses the random module to select questions and generate certain game activities. All information is maintained during the current program session using Python data structures. No SQL database, file handling or external database is used.

3.2 Subjects

The quiz contains questions from four main subjects:

- Python
- Mathematics
- Science
- General Knowledge

Each subject contains questions divided into:

- Easy
- Medium

- Hard

This allows the player to experience questions with different levels of difficulty.

3.3 Quiz Modes

The project provides multiple ways to play:

1. Classic Quiz
2. Rapid Fire
3. Survival
4. Daily Challenge
5. Boss Battle
6. Tournament
7. Category Mix

Each mode provides a slightly different gameplay experience.

3.4 Game Hub

Apart from quizzes, the project contains a Game Hub with:

- Quick Math
- Number Hunt
- Rock Paper Scissors

These activities provide additional ways for the player to earn points and coins.

3.5 Power-Ups

The quiz also provides power-ups to make the gameplay more interactive.

The available power-ups are:

- 50/50

- Hint
- Phone
- Skip
- Double
- Shield

The player receives a limited number of power-ups and can also interact with the Arena Shop.

3.6 Player Progress

The program maintains several player statistics during the current session, including:

- Score
- XP
- Level
- Correct answers
- Wrong answers
- Questions attempted
- Current streak
- Best streak
- Number of quizzes
- Games played
- Coins
- Boss wins
- Tournament progress

- Achievements

This makes the application more game-oriented than a basic quiz program.

3.7 Objective of the Project

The main objectives are:

- To develop an interactive Python application.
- To apply basic Python programming concepts practically.
- To create an engaging quiz environment.
- To provide multiple subjects and difficulty levels.
- To demonstrate the use of functions.
- To use lists and dictionaries for structured data.
- To use randomization for question selection.
- To maintain player statistics during a session.
- To provide a simple game-based learning experience.

COMMERCIAL SCOPE

The current Ultimate Quiz Arena is a console-based academic project. However, its basic concept can be expanded into a larger educational application.

4.1 Educational Applications

The project can be adapted for:

- School quizzes
- College practice tests
- Competitive examination preparation
- Programming practice
- General knowledge competitions
- Classroom activities
- Self-learning applications

Different question banks could be created for different subjects and courses.

4.2 Online Quiz Platform

The current application can be extended into a web-based platform where students could access quizzes through a browser.

Possible additions include:

- User accounts
- Online question banks

- Online leaderboards
- Teacher dashboards
- Result history
- Timed examinations
- Online competitions

4.3 Mobile Application

The same concept could be developed as a mobile application.

The existing game structure could be converted into a graphical interface containing:

- Buttons
- Question cards
- Score displays
- Progress bars
- Achievement badges
- Game animations

4.4 Institutional Use

Educational institutions could use an expanded version for conducting:

- Department quizzes
- Inter-class competitions
- Programming contests
- General knowledge competitions

- Practice examinations

4.5 Future Scope

Future versions could include:

- A larger question database
- User login
- Persistent scores
- Online multiplayer
- Database integration
- Graphical user interface
- AI-based question generation
- Detailed performance analytics
- Cloud-based leaderboards

These features are future possibilities and are not part of the current basic version.

PYTHON FRONT END

5.1 Introduction

The front end of Ultimate Quiz Arena is a **console-based user interface** developed completely in Python.

The user interacts with the program through the terminal by entering numerical choices and answering questions.

5.2 Technologies Used

Technology	Purpose
Python	Main programming language
random module	Random question and game selection
Lists	Storing questions, options and records
Dictionaries	Storing player and question information
Functions	Dividing the program into manageable sections
Conditional statements	Handling choices and decisions
Loops	Repeating menus and quiz questions
input()	Taking user input
print()	Displaying information

5.3 Main Menu

The application provides the following main menu:

=== ULTIMATE QUIZ ARENA ===

1. Quiz Modes
2. Game Hub
3. Arena Shop
4. Player Stats
5. Achievements
6. Leaderboard
7. Arena Guide
8. Exit

Each option calls a separate user-defined function.

5.4 Quiz Modes Menu

The quiz menu contains:

1. Classic Quiz
2. Rapid Fire
3. Survival
4. Daily Challenge
5. Boss Battle
6. Tournament

7. Category Mix

8. Return

5.5 Game Hub

The Game Hub contains:

1. Quick Math

2. Number Hunt

3. Rock Paper Scissors

4. Return

5.6 Arena Shop

The Arena Shop allows the player to interact with the available power-ups and the Risk and Reward option.

The shop uses coins maintained in the player's session data.

UDFs :

(USER DEFINED FUNCTIONS)

- 1 . title() Displays headings and section titles
- 2 . num() Takes and validates numerical input
- 3 . wait() Pauses the program before continuing
- 4 . level() Selects the quiz difficulty level
- 5 . choose_subject() Selects the quiz subject
- 6 . ask() Displays a question and processes the answer
- 7 . quiz() Runs the main quiz system
- 8 . modes() Displays and handles quiz modes
- 9 . games() Handles Game Hub activities
- 10 . shop() Handles Arena Shop and power-ups
- 11 . stats() Displays player statistics
- 12 . achieve() Displays earned achievements
- 13 . board() Displays the session leaderboard
- 14 . help() Displays the Arena Guide
- 15 . main() Controls the main program and menu

ALGORITHM

Step 1: Start the program.

Step 2: Initialize the player information, question bank, scores and available power-ups.

Step 3: Display the Ultimate Quiz Arena title.

Step 4: Display the main menu.

Step 5: Take the player's choice.

Step 6: If the player selects Quiz Modes, open the quiz mode menu.

Step 7: Select the desired quiz mode.

Step 8: Select the subject and difficulty where required.

Step 9: Select questions from the question bank.

Step 10: Display each question with its options.

Step 11: Take the player's answer.

Step 12: Check the answer.

Step 13: Update score, XP, correct answers, wrong answers and streak.

Step 14: Apply power-ups if selected.

Step 15: Continue until the quiz is completed.

Step 16: If Game Hub is selected, display the available mini-games.

Step 17: If Arena Shop is selected, display power-ups and available shop options.

Step 18: If Player Stats is selected, display the player's current statistics.

Step 19: If Achievements is selected, display earned achievements.

Step 20: If Leaderboard is selected, display the current session scores.

Step 21: If Arena Guide is selected, display the instructions.

Step 22: Return to the main menu.

Step 23: If Exit is selected, display the exit message.

Step 24: End the program.

CLASSIC - Question 1 of 3
What is the output of print(3 * 'Hi')?
A. HiHiHi
B. 3Hi
C. Hi3
D. Error
Power-ups: 50/50 | Hint | Phone | Skip | Double | Shield
Answer or power-up: 1
Enter A, B, C, D or a valid power-up.
Answer or power-up: A
Correct! + 20 points
Explanation: A string can be repeated with the * operator.

CLASSIC - Question 2 of 3
Which data type stores unique values?
A. List
B. Tuple
C. Set
D. String
Power-ups: 50/50 | Hint | Phone | Skip | Double | Shield
Answer or power-up: D
Wrong. Correct answer: C
Explanation: A set stores unique elements.
```

```
C:\windows\py.exe x + v

Choose difficulty: 1

CLASSIC - Question 1 of 3
What is the output of print(3 * 'Hi')?
A. HiHiHi
B. 3Hi
C. Hi3
D. Error
Power-ups: 50/50 | Hint | Phone | Skip | Double | Shield
Answer or power-up: 1
Enter A, B, C, D or a valid power-up.
Answer or power-up: A
Correct! + 20 points
Explanation: A string can be repeated with the * operator.

CLASSIC - Question 2 of 3
Which data type stores unique values?
A. List
B. Tuple
C. Set
D. String
Power-ups: 50/50 | Hint | Phone | Skip | Double | Shield
Answer or power-up: D
Wrong. Correct answer: C
Explanation: A set stores unique elements.

CLASSIC - Question 3 of 3
What does len([4, 8, 12, 16]) return?
A. 3
B. 4
C. 5
D. 16
Power-ups: 50/50 | Hint | Phone | Skip | Double | Shield
Answer or power-up: B
Correct! + 20 points
Explanation: There are four elements in the list.

Result: 2 correct
Round points: 40

SUBJECT
1 Python
2 Mathematics
3 Science
4 General Knowledge
Choose subject: 2

DIFFICULTY
1 Easy
2 Medium
3 Hard
Choose difficulty: 1

FINAL – Question 1 of 3
What is √144?
A. 10
B. 11
C. 12
D. 14
Power-ups: 50/50 | Hint | Phone | Skip | Double | Shield
Answer or power-up: c
Correct! + 20 points
Explanation: 12×12=144.

FINAL – Question 2 of 3
What is 12 × 8?
A. 86
B. 96
C. 108
D. 112
Power-ups: 50/50 | Hint | Phone | Skip | Double | Shield
Answer or power-up: b
Correct! + 20 points
Explanation: 12×8=96.
```

```

C:\windows\py.exe
What is  $\sqrt{144}$ ?
A. 10
B. 11
C. 12
D. 14
Power-ups: 50/50 | Hint | Phone | Skip | Double | Shield
Answer or power-up: c
Correct! + 20 points
Explanation:  $12 \times 12 = 144$ .

FINAL - Question 2 of 3
What is  $12 \times 8$ ?
A. 86
B. 96
C. 108
D. 112
Power-ups: 50/50 | Hint | Phone | Skip | Double | Shield
Answer or power-up: b
Correct! + 20 points
Explanation:  $12 \times 8 = 96$ .

FINAL - Question 3 of 3
What is 25% of 200?
A. 25
B. 40
C. 50
D. 75
Power-ups: 50/50 | Hint | Phone | Skip | Double | Shield
Answer or power-up: c
Correct! + 20 points
Explanation: 25% is one fourth, so the answer is 50.
Perfect round! +50 points

Result: 3 correct
Round points: 60

➤ Quiz Mode – Category Mix

```

C:\windows\py.exe
Choose: 7

=====
Category Mix
=====

CATEGORY MIX - Question 1 of 6
Which gas do plants mainly use in photosynthesis?
A. Oxygen
B. Nitrogen
C. Carbon dioxide
D. Hydrogen
Power-ups: 50/50 | Hint | Phone | Skip | Double | Shield
Answer or power-up: C
Correct! + 20 points
Explanation: Plants use carbon dioxide.

CATEGORY MIX - Question 2 of 6
What is  $\sqrt{144}$ ?
A. 10
B. 11
C. 12
D. 14
Power-ups: 50/50 | Hint | Phone | Skip | Double | Shield
Answer or power-up: C
Correct! + 20 points
Explanation:  $12 \times 12 = 144$ .

CATEGORY MIX - Question 3 of 6
d={'a':10}; print(d.get('b',0)+d['a']) gives:
A. 0
B. 10
C. 20
D. Error
Power-ups: 50/50 | Hint | Phone | Skip | Double | Shield
Answer or power-up: D
Wrong. Correct answer: B
Explanation: The missing key returns 0, so  $0+10=10$ .

CATEGORY MIX - Question 4 of 6
What does len([4, 8, 12, 16]) return?

```

```

C:\windows\py.exe
Wrong. Correct answer: B
Explanation: The missing key returns 0, so  $0+10=10$ .

CATEGORY MIX - Question 4 of 6
What does len([4, 8, 12, 16]) return?
A. 3
B. 4
C. 5
D. 16
Power-ups: 50/50 | Hint | Phone | Skip | Double | Shield
Answer or power-up: B
Correct! + 20 points
Explanation: There are four elements in the list.

CATEGORY MIX - Question 5 of 6
Determinant of  $\begin{bmatrix} 2 & 1 \\ 3 & 4 \end{bmatrix}$  is:
A. 5
B. 6
C. 8
D. 11
Power-ups: 50/50 | Hint | Phone | Skip | Double | Shield
Answer or power-up: B
Wrong. Correct answer: A
Explanation:  $2 \times 4 - 1 \times 3 = 5$ .

CATEGORY MIX - Question 6 of 6
Determinant of  $\begin{bmatrix} 2 & 1 \\ 3 & 4 \end{bmatrix}$  is:
A. 5
B. 6
C. 8
D. 11
Power-ups: 50/50 | Hint | Phone | Skip | Double | Shield
Answer or power-up: A
Correct! + 20 points
Explanation:  $2 \times 4 - 1 \times 3 = 5$ .

Result: 4 correct
